

## Creating EndPoint from Existing Model Artifacts

If you already have a model available in S3, you can deploy using SageMaker SDK.

1. Download attached resource **Deploy\_Model.ipynb**
2. Upload to your SageMaker Notebook instance.
3. Open the notebook file from the SageMaker Notebook instance
4. Update the S3 location to point to your model artifacts
5. Run the code to deploy

It is straight forward!
